

# Apps

Apps allow you to extend the capabilities of your Blue Pill with additional packages. These packages are not designed to control specific devices like other packages available on the packages page.

The screenshot displays the 'Apps' section of the SKAARHOJ System Manager. The top navigation bar includes 'System', 'Home', 'Configuration', 'Simulator', 'Apps', 'Packages', 'Settings', and 'Device: Enter device name'. The 'SKAARHOJ' logo is in the top right. Below the navigation, the title 'Apps' is followed by a subtitle: 'Here are all apps currently running on the system. Apps allow you to extend the capabilities of your bluepill with additional packages. To add/remove/start/stop them please go to [Packages](#)'. Two app icons are shown: 'Hardware Calibrator' (a blue square with three vertical sliders) and 'Testtube' (a blue square with a test tube). The bottom of the screenshot shows 'System Manager: v1.0.5-pre2 Copyright © 2024 SKAARHOJ' on the left and a 'Support' link on the right.
