

Page Layers

Please note: This video is made for Reactor 1.x
We have since released Reactor 2.x - and the video is no longer up-to-date.

This guide show you how to make Page Layers.

Say you wish control 8 parameters on a camera, but only have 4 encoders on your controller. In this case you make two 'Pages' - or layers - and assign different commands in each 'Page'. You then assign a button to toggle between the pages.

Revision #7
