

Routing Triggers

An example of a Routing Triggers settings table can be seen below. From here the camera select will trigger a specific route on either a designated routing panel or an aux source of a router.

Routing Trigger Settings Table

Column	Description
Order	Allows for quick rearranging of camera order. Right clicking on drag will allow for deleting the row.
Mute	Allows for removing access to a specific camera or to leave a blank spot on the panel
Bound Device	Opens a pop up window to select the specific device to insert into the slot. Helps bind the core to the device.
Device ID	The device number for the router or switcher to be used. See Devices section of this page for location information.
Routing Device Name	The device name for the router or switcher to be used. See Devices section of this page for location information.
Use Switcher or Hub	Drop down to select the configuration snippet to be used. The snippet name usually contains the device's name for ease of identification.
ME/Bus Select	The ME/Bus/Aux number to route onto.
Fallback Input	If Joystick Override is used, this will be the fallback input RCP only
	Delete the row.
	Duplicates the details of the column.
	Increments the number in the column by +1.

NEW	Adds a new line to create additional routing trigger. Please Note, a Route Index cell needs to be added in the Camera Select Routing Index column for every new destination added.
NEW (create multiple)	Opens a table to create multiple new routing trigger. See Batch Create section below.

Batch Create

Batch Create Rows

Amount of rows to create

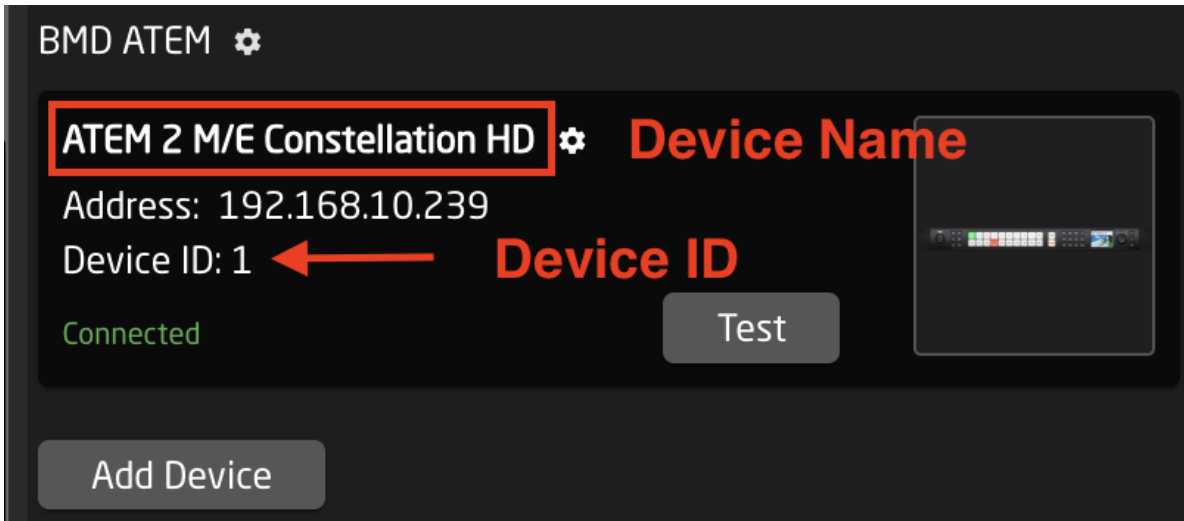

Select population behavior for each column:

Column name	Population behavior	Focused row value
Device ID:	Copy ▼	1
Routing Device Name:	Copy ▼	KUM0 6464
Use Switcher Or Hub:	Copy ▼	SKAARHOJ.Snippets.RoutingControl.Aja-Kumo.Ou:
ME/Bus Select:	Copy ▼	1
Fallback Input:	Copy ▼	Fallback Input:

Amount of Rows to Create	The number of additional rows to be created.
Column Name	Which settings table row's info being referenced.
Populate Behavior	Select if the settings table row is to be empty, copied, or incremented by 1.
	<div style="background-color: #333; color: #fff; padding: 5px; border: 1px solid #555;"> <p>Empty</p> <p style="background-color: #4CAF50; color: white;">Copy</p> <p>Increment</p> </div>

Devices

In the connected Devices the Device number and name are found in the device information. Input this information in the Routing Trigger's settings table in the column of the same names.

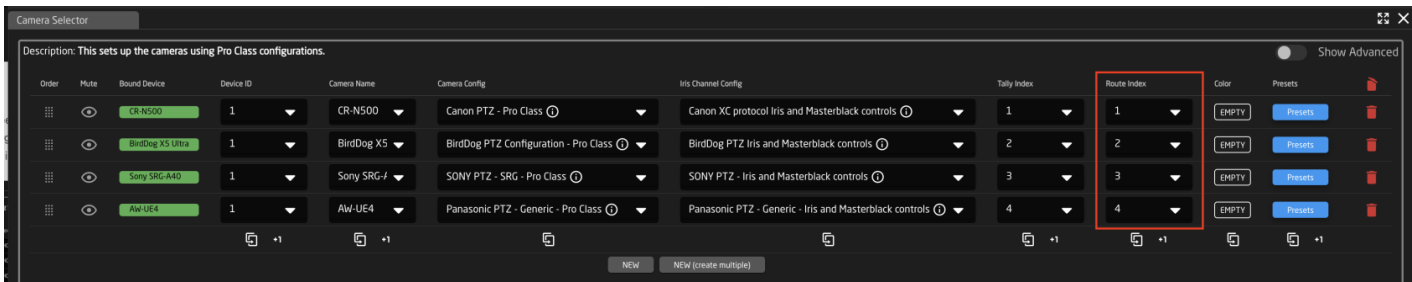

Camera Select Settings Table

To complete the process, the Routing Index number needs to be set in the Camera Select settings table. This number is the one associated with input number on the router or switching panel.

Please note that sometimes the first input might have an internal number of 0 (example: Atem Aux has Black as the first in the drop down, this is input 0 for aux routing)

If setting up multiple Routing Trigger destinations in the Routing Trigger Settings table, additional Route Index cells need to be add in the Routing Index column in the Camera Select Settings Table for the additional destinations to function.
