

Switching Projects via external HTTP Request

Reactor allows to switch the current project via an external HTTP POST request.

The endpoint used is: `/reactorapi/selectproject`

This request allows to use the skaarOS authentication via HTTP Basic Authentication (Use the latest version of system-manager to allow this (v1.0.1-pre1 and higher))

Curl example:

```
curl --location --request POST '192.168.0.20/reactorapi/selectproject' \  
--header 'Authorization: Basic YWRtaW46c2thYXJob2o=' \  
--header 'Content-Type: application/json' \  
--data-raw '{"Filename":"MyProject"}'
```
