

# Tools Page

In Reactor there is a dedicated Tools Page to bring a few specific options into a single place.

To access the Tools Page, use the Tools symbol in the lower right corner

This will bring you to the full Tools page. On this page you can:

1. Pinger Tool, to check availability of other devices on your network.

<https://wiki.skaarhoj.com/books/blue-pill-reactor/page/ping-tool>

2. IP Scanner, to scan for devices on other devices on your network.
  3. SkaarOS Stats Page, to check the internal processes of the Blue Pill device  
<https://wiki.skaarhoj.com/books/blue-pill-reactor/page/skaaros-stats-page>
  4. Clear Reactor Data, to clear the Reactor Cached data for the Panels and/or Devices
  5. Hardware Bootscreen Repair allows you to reset data controlling the startup animation of your device, so it gets updated on the next restart of the hardware-manager again
  6. HW Event Log, to help troubleshoot a potential hardware component issue.  
<https://wiki.skaarhoj.com/books/blue-pill-reactor/page/hw-event-log>
  7. Debuglog, If enabled it logs all hardware events and stats to a downloadable file for diagnostic purposes.
  8. Prometheus Metrics, generates Prometheus Metrics available at the Blue Pill devices IP address/metrics. This is then usable by Grafana to help monitor the devices processes for more intensive monitoring.
  9. Hardware Calibrator, allows for the calibrations of analog hardware on the local Blue Pill panel.
