Trophy #2

Air Fly - vMix (BPI)

SKAARHOJ

Benefits

- ★ Tactile controls, designed for vMix
- ★ Cost effective controller
- ★ Connects directly, no proxy software needed
- ★ Powered with Blue Pill Inside option
- ★ Master capability for Wave Board (Audio Control)

What to expect

Air Fly vMix comes with tactile controls labeled and designed for use with the features of your vMix switcher system. This makes it a cost effective alternative to more flexible SKAARHOJ controllers, such as the Air Fly Pro. When vMix is the only game in town, this is the controller you have been waiting for.

Air Fly vMix is available in a Blue Pill Inside (BPI) version which is strongly recommended. It's powerful enough to connect directly to vMix without intermediate software to analyze and translate the data. And it's powerful enough to interface with vMix when it has hundreds of inputs and audio channels.

Because of BPI you can use the Air Fly as a master panel to connect with additional panels such as a Wave Board for audio control.

Panel Versions

Air Fly vMix is available with both UniSketch and Blue Pill Inside (BPI) option. We strongly recommend the BPI option since it's powerful enough to connect directly to vMix without any proxy software. A BPI based Air Fly can also serve as a master for other UniSketch panels such as Wave Board to control Audio Channels in vMix.

Adding WaveBoard

Modularity with Blue Pill is a powerful way to get more out of your SKAARHOJ hardware. Check out Trophy #48!

Blue Pill and Reactor

Blue Pill is a SKAARHOJ platform that boosts the capacity and capability of SKAARHOJ UniSketch controllers. Reactor is our flagship panel management application running on Blue Pill or Blue Pill Inside (BPI) powered controllers.
