Trophy 43

Incredible Productivity with Panasonic Kairos

SKAARHOJ

Benefits

★ Tactile control over IP network
★ Controllers in all sizes, and with all components you need.
★ User-configurable layout
★ Create your own control surface - modularity from multiple SKAARHOJ modules

What to expect

SKAARHOJ's lineup of controllers all support Kairos using Blue Pill. They operate as an addition to Kairos Creator software by adding only the features that are needed to the tactile surface.

SKAARHOJ controllers can be used to Switch up to 10 layers in up to 20 scenes, of course with feedback and your custom naming from Kairos. Operate your transitions, execute your macros, or change the output on AUX. Even Playback control VTR/RAM players.

Application examples

- **Surface for your main Production** - Operate your main Scene from the surface you like most.
- **Extra Producer Panel** - Need an extra surface run two panels from the same Kairos
- **AUX Panel** - For your venue manager or light engineer, so they can see everything they need
- **Remote production** - Using a Blue Pill at the remote location and in the control room, SKAARHOJ surfaces mix and control live productions from distant location over VPN.

Kairos Video Switcher

Master Key One

Technical Note

Kairos requires BluePill or SKAARHOJ panels with Blue Pill Inside (BPI).

For remote production BluePill or BPI should be used in each remote location - one BluePill would communicate locally with Kairos, another one with remote panels. VPN tunnel needs to be provided between remote locations.
