Trophy #48

Broadcast Audio Control with vMix

SKAARHOJ

Benefits

- Adjust your vMix audio with eight premium flying faders
- Monitor volume levels with innovative OLED displays
- Programmable Mute, Solo, PFL buttons per channel
- Encoders with display for secondary parameters
- Navigate multiple pages via the left four-way buttons
- Connect other panels to expand (UniSketch or BPI)
- Connects directly with vMix, no proxy needed

What to expect

Wave Board V2 with Blue Pill Inside (BPI) offers you eight channels with motorized faders, a clear VU metering OLED display, three programmable two-way buttons and one encoder with push function and display - designed to maximize your control experience for vMix Audio.

A section with four buttons on the left side lets you navigate any number of pages with audio adjustments - literally hundreds of channels.

The BPI technology makes it easy to search for other SKAARHOJ panels on your network and add them as connected panels to create modular solutions: Expand with more direct access audio channels or let an Air Fly be your switcher panel, utilizing the power of Wave Board and BPI to connect with vMix directly.

Modularity

The Blue Pill platform inside Wave Board means that the Reactor panel management system can connect to multiple Wave Boards to create one larger unified control surface. Additionally, you could let the Wave Board do the heavy lifting and have a UniSketch based Air Fly panel connected for regular switching.

Blue Pill and Reactor

Blue Pill is a SKAARHOJ platform that boosts the capacity and capability of SKAARHOJ UniSketch controllers. Reactor is our flagship panel management application running on Blue Pill or Blue Pill Inside (BPI) powered controllers.
